

## **States Logistics to Open California – Arizona Transportation Lane**

November 6, 2006

Phoenix, AZ – States Logistics Services, Inc. announced the expansion of their company operated transportation services with the addition of a California to Arizona transportation lane. States will operate this lane on a daily basis with as many as five trucks completing the turn. With facilities in Southern California and Phoenix, Arizona the expansion of transportation services will create synergies between the two regions and will open the door to future opportunities. Kirk Hellofs, Vice President of Operations added, “We realized that this service would be of tremendous value to our customers looking to move their freight between our operating regions. By us operating this lane, it is another way for us to provide fully integrated solutions to our customers while keeping their costs under control.”

Along with the daily California to Arizona shuttles, States Logistics also operates local transportation, yard management, and brokerage services in the Los Angeles and Phoenix metro areas. They hope to add even more transportation solutions to their current offerings in the near future.
